

## Introduction

Dear readers!

LAMAD Inc. is a team of experienced educators, certified teachers, psychologists, parents, and young students. We believe that kids have hidden potential and that they learn most effectively through play and healthy activities. Our aim is to improve a child's logical thinking development and provide a test prep that is not just efficient, but also exciting for kids.

**We make learning fun and healthy!**

Our books are arranged by levels of complexity that allow your child to develop cognition gradually and reduce stress due to complicated questions at the beginning.

We appreciate your attention to our work and encourage you to share your feedback with us.

We are open to critique, suggestions, and new ideas.

### Tips for parents

**Don't overwhelm your child with piles of questions.**  
Even 20 minutes a day a couple times a week is a good start.

**Use scissors and glue. Cut and Paste.**

**Pattern Completion & Spatial Visualization.**  
Use materials you have at home. Cut out pictures from magazines and catalogs. Cut them into a few pieces and ask your child to put these pieces together as a puzzle.

**Let child form a visual perception.**

**Make learning fun and healthy! Give your child breaks for the physical activity. Use sensory materials (e.g. playdough, beans) for making patterns and groups.**

**Reasoning by Analogy & Serial Reasoning.**  
Use pencils, crayons, and pointy toys to demonstrate your child a clockwise and counterclockwise rotation.

**Start with simple questions.**

**Let your child feel that he or she is a successful problem solver.**
